

Reflex Vehicle Hire provides several added-value services to support fleet operators. Here is a summary of the key additional products available

Tyre Safe:

Live monitoring of tyre pressures for any vehicle. Tyre Safe provides valuable in-cab information about tyre pressures, allowing drivers to ensure vehicles are operated safely. Maintaining the correct pressures also improves fuel economy. Sensors placed on the tyres wirelessly communicate with a device in the cab, providing at-a-glance safety updates.

SERVICES TO SUIT YOUR NEEDS

Dedicated to providing the commercial vehicles and cars that you need, at the right price, on time, every time.

Axle Weight Monitor:

Experts estimate that up to 50% of UK vans could exceed their payload at some point, which makes weight monitoring a vital part of effective fleet management. Overweight vehicles can incur fines of £300. It is vital to check the weight on each axle and our Axle Weight Monitor provides live data updates, so you can keep track of payloads during the loading process. It can also provide alerts and warnings and sends updates to managers through our Flexitrack telematics technology.

Driver ID:

In a busy fleet environment, it can be difficult to keep track of which employee is in each vehicle. Using the Driver ID system, managers have at-a-glance certainty over who is in control of each vehicle asset. The system can work with a single touch fob, wireless Bluetooth technologies or keycode entry and it provides log-in reminders when starting the vehicle. Driver ID can also integrate with Flexitrack telematics systems to provide personalised driver performance updates.
